

Apple iPhone: Editing photos on an Apple iPhone is a straightforward process. Here's a step-by-step guide on how to edit photos using the built-in Photos app on an iPhone:

1. Open the Photos app on your iPhone.
2. Navigate to the album or folder where the photo you want to edit is located.
3. Tap on the photo to open it.
4. Once the photo is open, tap on the "Edit" button located at the top right corner of the screen. This will take you to the editing interface.
5. In the editing interface, you'll find several tools and options at the bottom of the screen:

- Crop: Tap the crop icon to adjust the composition of the photo. You can crop it to a specific aspect ratio or freely adjust the frame.

- Filters: Tap the filters icon to apply pre-set filters to the photo. Swipe left or right to preview and choose the desired filter.

- Adjustments: Tap the adjustments icon (dial with dots) to access a range of editing tools:

- Light: Adjust the brightness, exposure, highlights, shadows, and more.

- Color: Modify the saturation, contrast, warmth, tint, and other color settings.

- B&W: If you prefer a black and white photo, you can adjust the intensity and tone.

- Sharpen: Enhance the clarity and sharpness of the photo.

- Vignette: Add or remove a dark or light vignette around the edges of the photo.

- Noise Reduction: Reduce any digital noise or grain in the photo.

- Auto: Tap the "Auto" button to automatically enhance the photo based on the app's analysis.

- Rotate: If the photo is oriented incorrectly, tap the rotate icon to adjust its orientation.

- Crop Aspect Ratio: To change the aspect ratio of the photo, tap the crop aspect ratio icon and choose the desired ratio.

- Retake: If you want to discard the edits and revert to the original photo, tap the retake icon.

- Done: Once you're satisfied with the edits, tap the "Done" button to save them.

6. After tapping "Done," the edited photo will be saved as a separate copy, preserving the original photo.
